

Tirana computer room dedicated UPS uninterruptible power supply

Overview

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is key in server rooms and data centres. Why?

It gives backup power during blackouts, keeping vital equipment running. It works fast as light, spots power gaps, and then flips to its battery reserve. This avoids losing data or damaging hardware. What's more?

.

What is an uninterruptible power supply for server room use?

An uninterruptible power supply for server room use is a backup power solution that kicks in instantly when the main power source fails or fluctuates. It bridges the gap between a power outage and the switchover to a backup generator or safe shutdown.

How does ups work in a server room?

UPS for server room works in three main ways of functioning. Here, the UPS gets its power from the regular power supply. This supply has the right voltage and frequency the UPS needs to work. During the Normal Mode a piece called a rectifier changes AC power to DC power. This powers up an inverter and charges batteries.

Does a server room need an ups?

A UPS does more than just deliver backup power during a power cut. It's key in smoothing out power. Server rooms don't like ups and downs in power, or sudden increases. These can damage things and make things slow. A UPS takes away these problems, giving a clean, steady supply.
