UPS uninterruptible power supply for Oslo Power

Overview

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

What is an UPS system & how does it work?

UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions. The function of a UPS depends on the application's power requirements.

What is a standby UPS?

A Standby UPS is a battery backup system where the battery is charged by the main power supply and connected to an inverter through a transfer switch. As shown in the block diagram of Figure 1, during normal operation, the system runs on primary power while the inverter remains inactive.

How does a standby Ferro ups work?

The Standby-Ferro UPS (also known as standby ferro-resonant UPS) uses a three-winding transformer to couple the load to the power source. As shown in Figure 3, primary power flows through a normally closed transfer switch to the transformer coils, where it is coupled to the secondary coil and supplies power to the output load.
