Warsaw solar Glass

Overview

What is photovoltaic insulated glass?

Photovoltaic insulated glass is used as a filling of a standard facade and glass skylights. The outer side of the combination is made of a photovoltaic module. The use of an appropriate type of low-emission coatings improves the heat transfer coefficient achieved by a given type of combination:.

What is a photovoltaic glazing set?

One and two-chamber photovoltaic glazing sets can be in various configurations, fulfilling many functions: bulletproof glass - thanks to a specially selected technology, the set becomes bulletproof. The most advanced model is the PVGLASS + - insulated glass, integrated with the photonic, heating and photovoltaic layer.

What is pvglass - insulated glass?

The most advanced model is the PVGLASS + - insulated glass, integrated with the photonic, heating and photovoltaic layer. The solution is a source of electricity and heat in the room, it also allows the selection of glass transparency depending on the user's preferences.

Why should you choose daglass pvsolar glass?

Self-cleaning properties of DAGLASS PVSOLAR glass provide up to a dozen or so % more energy produced from each module - without the need to wash its surface. Due to higher hemispherical transmittance and a cleaner front glass in the modules, the increased volume of energy production can be achieved.
