

Western European solar Panels BESS

Overview

Will 10x Bess be installed by 2030?

Battery Storage Europe Platform launched last week with a call to 10X BESS installations by 2030. Image: SolarPower Europe The European Union (EU) will not meet its 2030 clean energy targets unless cumulative battery storage deployments rapidly accelerate, SolarPower Europe has said.

How much does Bess cost in Europe?

In early 2024, the price of residential BESS offered to end consumers in Europe ranged widely, from €400 to more than €1,200 per kilowatt-hour (kWh) (Exhibit 2). Historically, European OEMs built trust-based brands by highlighting their “made in Europe” status and rode the first-mover wave over the past ten years.

Are co-located Bess a viable energy option in Europe?

Deals have also been recorded in France, Poland, Austria, the Netherlands, and Bulgaria, where a 2.5 GWh optimization agreement was announced last spring. Despite the challenges, co-located BESS continue to gain ground and are set to remain a lasting feature of Europe’s energy landscape.

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing Europe’s total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.
