## Overview

---

What is a base station?

**Network Coverage:** Base stations cover a given part of the earth. Various base stations are set up in such a way that forms a network to encompass all areas of the city, region or even an entire country.

How important is base station operation?

These results indicate that base station operation can help operators efficiently build networks and effectively shorten the ROI period. According to Huawei's Wireless Network Market Insight statistics, global mobile operators have a total of about 6 million physical base stations.

How long does a base station last?

According to the analysis of FTTx costs of operators in 12 countries across 6 regions, the ROI period of base station operation is generally 3 years, about 3-4 years fewer than that in traditional network construction.

Why are base stations important for modern telecommunications?

In summary, base stations are critical for modern telecommunications as they serve as the link between mobile devices and the extensive network infrastructure that spans the globe. The strategic deployment and ongoing improvement of these stations are essential for maintaining global connectivity.
