What is a DC inverter & how does it work?

As we know, the basic function of the inverter is to convert DC power to AC power because most of our electrical needs are for AC. The inverter is connected directly to either the power source (solar PV array or wind turbine) or the charge controller, depending on whether backup storage batteries are used.

What are inverter specifications?

Specifications provide the values of operating parameters for a given inverter. Common specifications are discussed below. Some or all of the specifications usually appear on the inverter data sheet. **Maximum AC output power** This is the maximum power the inverter can supply to a load on a steady basis at a specified output voltage.
