

# What is the use of solar energy storage inverter

## Overview

---

What is a solar inverter used for?

**Solar inverter** The inverter is used for converting DC power into AC power. Since the solar cell and the battery are DC power sources while the load usually needs AC power supply, the solar inverter is indispensable. The solar inverter can be divided into the off-grid inverter and the on-grid inverter according to the operation mode.

What is solar inverter based generation?

As more solar systems are added to the grid, more inverters are being connected to the grid than ever before. Inverter-based generation can produce energy at any frequency and does not have the same inertial properties as steam-based generation, because there is no turbine involved.

What is a solar type inverter?

Solar type inverter is similar to an electric inverter, but the main difference between these two is; electric inverter works on electric power using batteries, whereas a solar inverter works on using energy directly from the sun.

Why should I choose a solar inverter?

This is because inverters are more efficient when working at their maximum power and most of the time the array is not at peak power. Using software like PV Sol takes in to account variations in different solar panels and local weather conditions. Both of which may affect your choice of inverter.
