

What kind of glass do solar manufacturers use

Overview

What type of glass is used in solar panels?

What kind of glass is used in solar panels?

Glass used in solar panels is primarily low-iron tempered glass, with a thickness typically between 3 to 6 millimeters, ensuring optimal light transmittance and durability. This type of glass is specifically engineered to enhance the efficiency of solar energy absorption by minimizing reflections.

Who makes solar Photovoltaic Glass?

As a leading solar photovoltaic glass manufacturer, it is a holding business for investments that produces and sells photovoltaic glass goods. IRICO Group is widely recognized as one of the world's top solar photovoltaic glass manufacturers. It was founded in 1984 and is currently headquartered in Beijing, China.

What is Solar Photovoltaic Glass?

This article explores the classification and applications of solar photovoltaic glass. Photovoltaic glass substrates used in solar cells typically include ultra-thin glass, surface-coated glass, and low-iron (extra-clear) glass.

Is glass a good choice for solar panels?

Glass is highly transparent and lets up to 99.95% of all light pass through it. This means the large majority of the sunlight hitting the face of your panels will be transmitted to your solar cells for energy production. Glass varies in degrees of transparency, but most types of clear glass are suitable for PV panels.
