

What size inverter should I use for 12a

Overview

How big should a solar inverter be?

To account for power losses assume an 80 percent efficiency. Your solar inverter should have a similar or slightly higher wattage rating than the DC output of your solar panels (which in this case is 4.5 kW). You can size it between 1.15 and 1.5 times larger. The rule of thumb is to size your inverter 1.25 bigger than your solar array.

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

How do I choose a rated inverter?

You must consider this to select an appropriately rated inverter. A straightforward method to calculate inverter size is: $\text{Inverter Size (VA)} = \text{Total Wattage (W)} / \text{Power Factor (0.7-0.8)}$ Once calculated, choose the next standard inverter size above your result to ensure safe and efficient operation.

How do I choose a solar inverter?

Knowing your array size allows you to choose an inverter that can handle that production efficiently—without over- or under-investing in capacity. The second step is understanding your system's DC-to-AC ratio, one of the most important metrics when sizing a solar inverter.
