

# **Zero auxiliary source solar energy storage inverter**

## Overview

---

Can a solar storage system be a zero-export system?

In a typical household, the proportion of self-generated solar power after installing such a storage system is 50% to 70%. If a PV inverter from another manufacturer is installed in the existing system or the existing inverter cannot be regulated, the system can be upgraded to a zero-export system by adding a storage system.

Can a zero-export Solar System feed into the utility grid?

Such systems are not designed for feeding into the utility grid and they actively prevent this. The zero-export system from SMA maximizes self-consumption and uses 100% of the self-generated solar power. Our system lets customers expand the solar energy without high additional investments in the utility grids.

Should I install a storage system with a smart PV inverter?

In the case of systems where grid feed-in is not possible or desired, but you want to increase the proportion of self-generated energy in the consumed power, we advise installing a storage system in addition to the smart PV inverter. This reduces grid purchase costs to a minimum.

What is an energy storage inverter?

An Energy Storage Inverter is a specialized power inverter designed to manage the flow of electricity between a battery storage system, the grid, and connected loads. It plays a crucial role in converting, storing, and distributing energy efficiently in renewable energy systems.
